CombLine After Care

First 24 Hours after Application

Do not wash hair or use any hot tools immediately after treatment, for at least 24 hours. Only brush hair gently from mids to ends for at least the first 24 hours.

Shedding

On average, we lose approximately 150-200 strands of hair from our head per day - this is completely normal, and even with the CombLine application some of your extension hair will shed with your own hair.

In the first week after application, there will be excess hair in the brush when brushing from root to end. This will be a combination of “loose” and “bonded” hair, and is completely normal after each installation.

After the first week, you will have minimal shedding of loose and bonded hair.

It is important not to touch or pick at the bonds excessively, as this can cause the bonds to break down and cause discoloration.

Washing & Styling

Use a shampoo and conditioner recommended by your stylist specific to the CombLine application. Do not massage in a circular motion on the scalp when shampooing - massage shampoo at the root gently from top to bottom in a downward motion. After shampoo, apply the conditioner to the hair and comb it through the hair gently.

When drying, pat the hair dry with a towel. Do not rub the towel at the scalp where the CombLine application is. Brush gently from root to end and over the bonds using the CombLine extension brush.

Evening Care

Before going to bed, put hair in a loose braid to help avoid matting and tangling while you sleep. Sleep with a silk pillow case or bonnet. Never go to bed with wet hair, as this can cause tangling and matting at the CombLine application.

Swimming

Follow all Jovi Salon Extension Maintenance & After Care instructions. In addition, Immediately after swimming, rinse your hair with clean water, and pat dry with a towel, then gently comb from roots to ends.
